

MTFS *Youth Learn*

Supporting Education in Science,
Technology, Engineering, and
Math

Igniting students interest in STEM through experiential learning and technology exploration

MTFS *Youth Learn* provides both equipment and curriculum to ignite student interest in the possibilities of technology. Through this youth program, we work with middle and high schools to create custom programming around building fundamental technical skills - like CompTIA IT Fundamentals+ and Cisco IT Essentials - and practical application through courses including website design, app design, and game and coding design.

MTFS *Youth Learn* opens the door to an intentional and accessible STEM pipeline leading to career and higher education opportunities in STEM and IT fields. Giving students this opportunity to cultivate early experiences in the STEM industry can lead them to sustainable, family-supporting, and successful careers, advancing the inclusivity of the STEM field.

"When taking the video game design class, I got to actually make a video game and that's always been my dream. Thanks to this class I know I can make my dream come true." - Isaiah, participant

HOW TO GET STARTED

Let's work together to help
students discover their potential

ABOUT MINNESOTA TECH FOR SUCCESS

Minnesota Tech for Success is on a mission to create digital equity for all Minnesota students. With programming focused on Expanding Access & Digital Equity, Providing Education & Skills Training and Protecting Data & Sustainability, we take a full circle approach to digital equity and the life cycle of technology.

Transforming Technology, Empowering Potential
